SUMMARY

Computer Engineering student (GPA 3.8, Tau Beta Pi — top 8% of engineering class) with production experience building REST API-integrated web applications, embedded control systems, and data analysis pipelines. Proficient in Python, JavaScript, and C/C++. Seeking a software engineering internship to contribute to real systems from day one.

EDUCATION

University of Kentucky | B.S. Computer Engineering | AI Certificate (In Progress) | *Aug 2025 – May 2028*

- GPA: 3.8/4.0 | Dean's List | Tau Beta Pi Engineering Honor Society (Top 8% of engineering class)
- Relevant Coursework: Systems Programming, Logic Circuit Design, Embedded Systems, Engineering Practice

TECHNICAL SKILLS

Languages: Python, JavaScript, C/C++, HTML, CSS, Assembly

Frameworks & Libraries: React, Pygame, PyQt5, NumPy, Pandas, Matplotlib

APIs & Protocols: OpenAI API, REST APIs, UART, GPIO

Tools: Git/GitHub, VS Code, PyCharm, MATLAB, Arduino IDE

Other: Fluent in English and French

PROJECTS

AI-Powered Study Assistant | *JavaScript · OpenAI API · REST APIs · HTML/CSS* | [Live Demo](#) | [GitHub](#)

- Developed a web application that integrates the OpenAI API to generate educational content based on user input.
- Implemented a caching mechanism that reduced redundant API requests and improved average response times by approximately 40%.
- Implemented persistent session history using localStorage, enabling users to retrieve prior AI responses without re-querying the model.
- Built a fully responsive two-panel UI in vanilla HTML/CSS/JS with debounced input handling and enforced plain-text AI output for readability.

Student Performance Analyzer | *Python · Pandas · NumPy · Matplotlib* | [GitHub](#)

- Ingested and cleaned a 1,000-record student dataset; computed per-subject descriptive statistics (mean, median, standard deviation) and Pearson correlation matrices across three academic subjects.
- Built a vectorized grade-classification pipeline converting continuous scores to letter grades, then rendered a color-coded pie chart for grade distribution analysis.
- Surfaced a strong Reading-Writing correlation ($r \approx 0.95$), demonstrating end-to-end analytical workflow from raw data to actionable insight.

NBA Stats Analyzer | *Python · Pandas · Matplotlib · Data Cleaning* | [GitHub](#)

- Detected and resolved duplicate game records that inflated team point totals by up to 10× — applied systematic data validation before any aggregation.
- Built a numeric-ID-to-team-name lookup layer to enable readable group-by analysis across all 30 NBA franchises.
- Produced 5 comparative visualizations (points, rebounds, assists, win rate, score distributions) to communicate rankings across an entire season dataset.

Hydroponic Monitoring System | *C++ · Arduino · MATLAB · Onshape · Sensors* | [Project Site](#)

- Calibrated pH and water-level sensor arrays across full operating ranges; iterative bench testing reduced measurement error by 80%.
- Wrote embedded C++ control logic to automate water regulation in real time based on live sensor readings, replacing manual adjustment cycles.

Pixel Runner Game | *Python · Pygame · Event-Driven Architecture* | [Live Demo](#) | [GitHub](#)

- Built a 2D runner game with a real-time physics engine: frame-independent gravity, AABB collision detection, and smooth sprite animation at consistent 60 FPS.
- Designed an event-driven game loop with start, play, and restart state management — demonstrating state machine implementation in Python.

Frontend Web Projects Collection | *Vanilla JavaScript · HTML · CSS · DOM APIs* | [Live Demo](#)

- Developed 5+ standalone projects demonstrating DOM manipulation, CSS animations, third-party REST API consumption, and responsive design patterns.

WORK EXPERIENCE

Web & Operations Intern — Pomme Rouge SARL | *Dec 2024 – May 2025* | Cameroon

- Led vendor evaluation and integration for the company's first digital platform; defined structured acceptance criteria and reduced client feedback cycles from 2 weeks to 3 days.
- Developed and maintained the company homepage in HTML/CSS; performed ongoing content updates and front-end edits to keep site data accurate.
- Built Excel-based tracking systems for fleet records, invoices, and operational data to support weekly management reporting.

LEADERSHIP & HONORS

Student Ambassador — University of Kentucky | *Aug 2025 – Present*

- Represent UK in Cameroon; advise prospective students on engineering admissions, scholarship opportunities, and academic programs.

Tau Beta Pi Engineering Honor Society — Member (2026) | Selected for academic excellence — top 8% of UK engineering class.
